#### **Meissner Overhead Cam Conversion:**

The cam box assembly was designed and developed by the late Willie Meissner in 1968 for all Ford cross-flow engines. This conversion gave a 20% increase in bhp performance and raised the safe-rev limit from 5,500 to 6,000 rpm. This was achieved without altering the standard bottom-end. This was tested by Ford's Product Engineering department and approved without alteration. Ford gave the conversion a full factory warranty of 6,000 miles.

This was quite an achievement as Ford only developed their overhead cam engine in 1971.

This unit was donated by Dr Con Joubert (Bloemfontein) to Peanuts Fouche.

This conversion was done by Pat Duckham in Pietermaritzburg.
